

Instructions for Sanillo Stand Assembly

1. Remove all items from packaging ensuring you locate small plastic bag with screws and allen keys
2. Place heavy base on the floor with **protective film side facing up** and tear small hole in protective film at the centre of the base approx. 80mm diameter to reveal the stainless steel beneath

3. Take base section of pole, which has a heavy flange and 3 holes underneath and 3 large Black counter sunk screws. Insert crews through bottom of base plate whilst holding the base section of the pole in position so the 3 bolts can be tightened, securing the pole to the base

4. Take top section of pole and screw into bottom section of the pole

5. Secure drip tray onto bottom pole support using 2 x small Hex screws provided

6. Take Sanillo dispenser from box and remove Black rectangular fixing panel and attach to mounting plate on the pole, ensuring it is attached the correct way up. Insert and tighten top screw with locking washer first, and then the bottom hole will then line up for securing to the corresponding hole in the back plate

Display Frame (not included)

- 1) Undo large stainless-steel flat screw cap from top of stand/pole
- 2) Insert small stand section included with the frame
- 3) Connect frame to ball joint using bolt and wingnut provided and push-fit ball joint into retaining hole at the top of the stand
